Retinol

PROAGE

The passage of time on skin

Skin aging is a continuous process that entails a series of structural and functional changes at cellular level and, as a result, in the different components of the dermis and epidermis. Among these changes, the most important is on the skin's natural renewal process.

The epidermis and the natural renewal process

Skin cells continually renew themselves. This process occurs on the outermost layer of the skin, the epidermis. The new cells are born in the deepest layer and mature as they rise to the surface, pushed upwards by new cells from lower layers. The process ends when they are shed as dead cells.

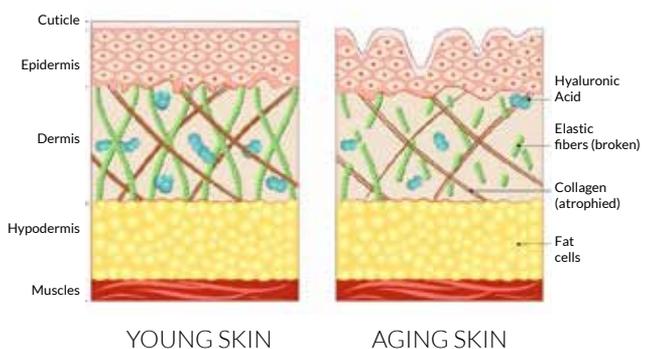

The balance between cell birth, maturation and shedding is critical to skin health and aging. At 20 years of age, this process usually lasts between 24 and 30 days, while at 50 years of age it can last up to 84 days. As a result, signs of aging become increasingly more visible.

The dermis, the skin's support

It is located underneath the epidermis.

One of its most important functions is to give the skin strength, density and elasticity.

Among other elements, it is formed by a complex and resistant fibrous structure of collagen and elastin fibers, immersed in the fundamental substance composed of water, proteins, electrolytes and mucopolysaccharides such as hyaluronic acid.

These changes result in decreased collagen, elastin or hyaluronic acid, among other molecules. The skin loses its firmness and elasticity and the dreaded wrinkles, dark spots and skin flaccidity appear.

Retinol

Retinol is the rejuvenating molecule par excellence, with a long history of use in the cosmetic and medical-aesthetic market, thanks to its unquestionable efficacy.

Its significant skin transformation capacity is **backed by numerous scientific studies and medical publications**, making it one of the star active ingredients to combat skin aging.

What is Retinol?

It is a cosmetic active ingredient derived from **vitamin A**. All vitamin A derivatives are generically called retinoids and these molecules are naturally present in our body to fulfill various essential functions.

There are several retinoids on the market with very different effectiveness profiles, such as, for example: retinaldehyde, retinyl palmitate, etc. It is very important to differentiate them from **pure retinol**, which is undoubtedly **the most powerful and scientifically endorsed cosmetic active ingredient of them all**.

Retinol penetrates the deepest layers of the skin thanks to its light molecular weight, resulting in a visible skin transformation through the synergy of several mechanisms of action, including intervention in the **skin's natural renewal process and the reconstruction of the dermis**.

As it is such a powerful active ingredient, it must be used according to certain guidelines, and professional advice is key in order to adapt the treatment and retinol concentrations to the skin's needs. Furthermore, its use must be initiated **progressively** through a process called **skin retinization**, which we will describe in more detail below.

Retinol

PROAGE

Retinol PROAGE TREATMENT

- **WHAT IS IT?**

Retinol Proage Treatment is a treatment with an incredible **transformative action** that visibly reduces signs of aging, **recovering the skin's natural beauty**.

It works comprehensively, effectively treating the two main skin layers, epidermis and dermis, leading to genuine **skin renewal**. Its powerful and unique blend of active ingredients works synergistically, reducing wrinkles, fading dark spots, increasing firmness and significantly improving skin texture.

Retinol Proage Treatment features **PURE RETINOL**, further boosted by the innovative active ingredient **RETI-BOOST**. This biotechnological component enhances retinol's effectiveness, delivering **results equivalent to a 5 times higher dose of retinol**.

This exclusive treatment brings about a profound skin transformation. The results are comparable to those achieved with high medical doses of retinol while avoiding skin alteration and extreme dryness.

Maximum effectiveness and gentle on the skin.

Retinol

PROAGE

• WHO IS IT SUITABLE FOR?

Suitable for all skin types, regardless of prior exposure to retinoids. Recommended for all age groups, including young individuals, from 30 years of age, looking to delay the onset of early signs of aging, as well as mature individuals with more advanced skin aging. **Avoid the use of retinoids during pregnancy and breastfeeding.**

• MAIN ACTIVE INGREDIENTS

Retinol PROAGE TREATMENT is a unique and exclusive combination of formulas with a high skin transformation capacity, bringing together the most powerful anti-aging and regenerating active ingredients on the market.

PURE RETINOL

Available in two concentrations: **0.15% and 0.3%**. Retinol owes its spectacular **transformative action** to a combination of several mechanisms of action that act both on the surface and deep in the skin:

- **On the epidermis (short term):**

It intervenes directly in **natural skin renewal**. It accelerates the process by eliminating dead cells, allowing them to be replaced by new cells at a faster rate. Completely renewing the skin's surface leads to visibly improved signs of aging such as wrinkles and dark spots, achieving a **smooth, soft texture**.

- **On the dermis (long term):**

It stimulates collagen and elastin production, resulting in increased **firmness and elasticity**.

It stimulates hyaluronic acid production, improving skin hydration.

It is also a powerful antioxidant that **helps to reverse photoaging**.

RETI-BOOST

It is a structural analog of retinoic acid, obtained through biotechnology from Chlorella algae. This active ingredient, which is unique on the market, exponentially increases the **transformative action** of pure retinol. Therefore, this blend delivers results **equivalent to a 5 times higher dose**.

Retinol

PROAGE

BAKUCHIOL

A natural plant retinoid that has been shown to activate the same **renewing** mechanisms as retinol with greater tolerance on sensitive skin. Therefore, the fusion of both molecules dramatically improves the results on the skin. It **significantly improves expression lines and wrinkles**, evens out tone, increases skin elasticity and improves firmness.

GROWTH FACTORS

Powerful advanced complex of 5 growth factors, vitamin B9 (folic acid) and amino acids. It has a similar composition to that of a human placenta and, as a result, it can stimulate cell growth and produce **intense skin tissue regeneration**. This extraordinary active ingredient repairs the damage caused by the passage of time on skin.

STABILIZED VITAMIN C

A multi-functional **anti-aging** active ingredient with high cosmetic effectiveness. It **increase collagen synthesis**, improving skin firmness and softening wrinkles. Thanks to its high **antioxidant capacity**, it also treats and prevents photoaging and brightens the skin. Therefore, used in combination with pure retinol both day and night, it offers extraordinary results.

SQUALANE

Powerful rehydration solution that also increases the speed of skin renewal and improves skin texture. It increases skin hydration by reducing transepidermal water loss. **It leaves the skin incredibly soft and rehydrated.**

Retinol

PROAGE

• ACTIONS

- **GLOBAL ANTI-AGING:** Visibly reduces all signs of aging.
- **TRANSFORMATIVE:** Renews the epidermis and reconstructs the dermis for a radical transformation that recovers the skin's natural beauty.
- **RETEXTURIZING:** Reduces wrinkles and exponentially improves skin texture.
- **FIRMING:** Increases collagen and elastin synthesis, improving skin firmness and elasticity.
- **BRIGHTENING:** Evens out tone and combats lack of radiance.

• RESULTS

THE DEFINITIVE TRANSFORMATION
that recovers your natural beauty

- ✓ A **fresher, more youthful** appearance
- ✓ Visibly **improved signs of aging**
- ✓ **Renewed**, softer and smoother skin
- ✓ **Stronger**, suppler and firmer skin
- ✓ **Even tone** and radiant skin

Retinol

PROAGE

TREATMENT PHASES

Retinol PROAGE

PHASE_1

NOURISHING PREPARATION

A sublime fusion of four potent plant oils (rice, macadamia, licorice, and squalane). Specially created to cleanse and prepare the skin without causing irritation, it provides the necessary hydration and nourishment to restore the skin's water and lipid levels.

It eliminates impurities, leaving the skin perfectly conditioned for the subsequent phases. Additionally, squalane increases the speed of skin renewal, initiating the skin transformation process right from the outset.

APPLICATION METHOD: 6 minutes

Apply the content of vial number 1 to the palm of your hand, and distribute it on the face, neck, and décolletage using your fingertips, performing circular motions for a couple of minutes. To aid in skin cleansing, emulsify the product by moistening your fingertips with water and then remove it with the assistance of a pre-moistened Casmara compact towel. Gently pat the skin dry for a completely comfortable sensation.

PHASE_2

REGENERATING

A regenerating serum with growth factors and proteoglycan that deeply strengthens the skin by reconstructing the dermis, the layer that supports and shapes the skin.

It reinforces the skin's architecture by regenerating the extracellular matrix and fortifying the structural and elastic fibers.

This serum provides long-lasting hydration, enabling the skin to regain its firmness and suppleness thanks to the combination of Hyaluronic Acid and Hydra+.

APPLICATION METHOD: 6 minutes.

Apply to the face, neck, and décolletage, massaging actively until fully absorbed for around 5–6 minutes. Use quick digital maneuvers moving upward, such as tapping, pinching, and surface gliding, to encourage both product absorption and skin activation.

Retinol

PROAGE

PHASE_3

RETINIZATION

A transformative fluid with pure retinol. Available in two concentrations (0.15% or 0.3%) in order to adapt the treatment to the needs of each client and professional criteria.

The combination with hyaluronic acid, squalane, and soybean extract enhances retinol's effectiveness, transforming the formula into a powerful blend that smooths and softens the skin's surface, improving its texture. It reduces wrinkles and dark spots while deeply firming and moisturizing.

APPLICATION METHOD: 10 minutes.

Apply with a highly relaxing massage until fully absorbed, using slower and longer movements compared to the previous phase to promote skin smoothing, relaxation of facial muscles and penetration of the cream.

PHASE_4

ENHANCING

Booster cream with Reti-Boost. It exponentially multiplies the action of the retinol applied in the previous phase, delivering results equivalent to a 5 times higher dose of retinol.

Additionally, this blend contains Bakuchiol, a powerful plant retinoid with similar functions that maximizes this synergy, along with Vitamin C, a multi-functional anti-aging active ingredient.

APPLICATION METHOD: 10 minutes.

Apply as drops to the forehead, cheeks, chin, and suprasternal notch to distribute and facilitate penetration on the face, neck, and décolletage using enveloping, slow, and deep movements that can be extended to the shoulders and arms until fully absorbed.

The combination of phases 3 and 4 is a true transformative revolution for skin. It reduces wrinkles and dark spots, while brightening and deeply firming skin, recovering its natural beauty.

Retinol

PROAGE

PHASE_5

REPAIRING B12 COMFORT MASK 3040

An Algae Peel-Off facial mask with repairing properties, specially designed for sensitized or stressed skin. Infused with vitamin B12 with a powerful soothing effect and an intense cooling sensation, it offers exceptional comfort to the skin.

Furthermore, the mask's occlusion enhances the penetration of the active ingredients applied in the previous phases, boosting their strength.

APPLICATION METHOD: 20 minutes

1. Empty the entire contents of the GEL (1) and GEL (2) into a bowl.
2. Using a spatula, vigorously mix both components for around 30–40 seconds, until you achieve an even mixture.
3. With the same spatula, apply and spread the mask over the face, working quickly, as it will begin to set 5 minutes after being prepared.
4. We recommend leaving the mask on for at least 15 to 20 minutes. For a more relaxing experience, you can manipulate the mask with gentle, superficial movements from its setting to its removal.
5. Remove the mask from top to bottom, starting from the edges.

PHASE_6

RENEWING ANTI-AGING

This powerful **renewing anti-aging cream with SPF50** provides **bakuchiol, vitamin C, and hyaluronic acid**, three powerful anti-aging ingredients that treat and prevent both chronological aging and photoaging.

With a dense yet quickly absorbed texture, it regenerates and smooths the skin, targeting wrinkles and firmness. It reduces the appearance of dark spots, evens out the tone, and provides intense brightness. It increases hydration and soothes sensitized skin.

It is essential to protect your skin from solar radiation while using retinol.

APPLICATION METHOD: 4 minutes

Apply a drop of the product to each fingertip to distribute it evenly over the entire face, using gentle pressure maneuvers and finishing movements akin to effleurage. If the professional deems it appropriate, the remaining vial can be given to the client for later use at home.

Retinol

PURE RETINOL

Retinol

PROAGE

Retinol PROAGE COLLECTION

Discover the transformative effectiveness of PURE RETINOL

The **Retinol PROAGE** collection offers a complete daily routine including a night cream, containing pure retinol, with a choice of two concentrations according to the retinization of your skin; and a renewing day cream with SPF50.

The combined action of both formulations results in a **powerful global anti-aging** and retexturizing action that visibly improves the signs of aging. With regenerating properties, for a **renewed complexion and smooth, soft and revitalized skin**.

Retinol PROAGE is the definitive transformation that recovers your natural beauty.

Retinol PROAGE Renewal Day Cream SPF50 50ml 1.7 fl. oz.

Exclusive **renewing anti-aging day cream with SPF 50**. It contains retinol-v (bakuchiol), stabilized vitamin C, and hyaluronic acid, an ideal blend of anti-aging active ingredients that complement the nighttime pure retinol treatment, maximizing its effectiveness. With a dense yet quickly absorbed texture, **it protects and soothes the skin, while preventing photoaging** and helping to correct the signs of aging by targeting wrinkles and dark spots. Furthermore, it provides deep hydration and revitalization. The result is **protected, radiant skin with reduced signs of aging**.

• MAIN ACTIVE INGREDIENTS

RETINOL-V: Anti-aging and renewing.

STABILIZED VITAMIN C: Revitalizing and firming.

HYALURONIC ACID: Rehydrating.

• WHO IS IT SUITABLE FOR?

Suitable for all skin types, including sensitive skin.

• APPLICATION METHOD

Apply during the day to a cleansed face and neck until fully absorbed.

Retinol

PROAGE

Retinol PROAGE Renewal Night Cream

30ml 1 fl. oz.

A lightweight and **highly renewing** night cream with pure retinol in **two concentrations, 0.15% or 0.3%**, in order to adapt the treatment to the retinization status of each skin.

It visibly reduces the signs of aging and photoaging, recovering the skin's natural beauty. Its carefully selected blend of active ingredients complements and enhances retinol's action, maximizing its impact on the skin.

It diminishes the quantity and depth of wrinkles, fades dark spots, while also firming and deeply moisturizing the skin. The result is renewed, **smooth skin with improved texture and a visibly younger appearance.**

• MAIN ACTIVE INGREDIENTS:

PURE RETINOL: Highly renewing.

HYALURONIC ACID: Rehydrating.

SQUALANE: Recovery.

• WHO IS IT SUITABLE FOR?

Suitable for all skin types, regardless of prior exposure to retinoids.

• APPLICATION METHOD

Apply at night, as a standalone product, to a cleansed face, neck, and décolletage.

Apply with progressive frequency based on the retinization protocol described below on non-retinized skin and daily if the process has been completed.

WARNINGS FOR USE

- Avoid contact with eyes and mucous membranes.
- In case of continued irritation, discontinue use.
- A change in color does not affect its effectiveness.
- Avoid use during pregnancy and breastfeeding.
- Avoid sun exposure and always use photoprotection.

SOL COLLECTION

Casmara Retinization Protocol

Retinization is the process required by the skin to become progressively used to retinoids, according to tolerance and skin type.

Retinol is a very powerful active ingredient and, when used incorrectly, it can sensitize the skin, causing discomfort such as irritation, redness, stinging, tightness, flaking or dryness.

To avoid these reactions, it is important to follow a correct retinization process based on professional advice, through the progressive use of products for home use.

The Casmara retinization protocol is totally safe and guarantees progressive and effective retinization, even on skin with low tolerance. Even so, professional judgment is essential in this process and regular assessments are highly recommended in order to adapt the treatment to the way in which each client's skin responds.

We recommend starting the process with the minimum concentration (0.15%), moving to the maximum recommended concentration (0.3%), if desired, after a few weeks, as explained below.

Retinol

Retinol

PROAGE

• GENERAL DAILY ROUTINE

At night:

- As a standalone product, **Retinol PROAGE Renewal Night Cream 0.15% or 0.3%**.
- On alternate nights when retinol is not used, we recommend **Age Defense. HYDRO-NUTRI Anti-aging 360° cream**, for its high microbiota recovery power.

During the day:

- Follow the usual beauty routine, finishing with **Retinol PROAGE Renewal Day Cream SPF50**.
If signs of discomfort or dryness appear, complete the daily routine with the products listed below.

• GENERAL WARNINGS

- Avoid use during pregnancy and breastfeeding.
- Avoid applying pure retinol around the eyes.

NOTES

The following points must be taken into account:

- The Renewal Night Cream (0.15% or 0.3%), acids, peels or exfoliating products should not be applied the night before the salon treatment. It is important to adapt the day of the salon treatment to the client's retinization protocol to avoid overloading the skin. **Each session of Retinol PROAGE Treatment replaces the use of Retinol PROAGE Renewal Night Cream on that day.**
- Some signs of mild skin discomfort such as redness, flaking or dryness may appear during the retinization period. It is important to let the client know that this is completely normal and that they will disappear as the retinization process progresses.
- It is important not to initiate retinization processes during the summer; this applies both to new users and to changes in concentration.
- Once the retinization period has been completed with a certain concentration, the treatment can be maintained with that concentration for as long as the user wishes, even in summer, taking into account that the skin is more photosensitized and that a high (SPF50) or very high (SPF50+) daytime photoprotection must be strictly applied.
- Not all users and skin types need to reach the maximum recommended concentration (0.3%). Certain skins may feel more comfortable with a reduced concentration (0.15%) and achieve great results. The use of 0.3% pure retinol must not be recommended for sensitive skin.
- If the process is interrupted, it is advisable to restart the skin retinization process gradually.

Retinol

PROAGE

WHAT PRODUCTS SHOULD BE AVOIDED DURING THE RETINIZATION PROCESS?

During the skin retinization process, the use of acids, peels and physical and chemical scrubs (alpha hydroxy acids, AHAs) should be avoided.

WHAT TO DO IN CASE OF DAILY DISCOMFORT?

If the skin becomes sensitized during the retinization process, leading to discomfort such as irritation, redness, stinging, tightness, flaking and/or dryness, it is because the skin's barrier function has been destabilized and needs to be restored and reinforced. A series of measures to be carried out are listed below:

Specific care

Whenever required by the skin

- **Multibenefit**, a repairing balm to help regenerate and protect sensitized areas. The most frequent are the eye contour, the lip contour and the nostrils.

During the day

- **Hydra-Sensi Ampoules**, for an extra moisturizing, soothing and refreshing effect, before the beauty routine, finishing with Retinol PROAGE Renewal Day Cream SPF50.

At night

Use a hydro-nourishing or nourishing cream after Retinol PROAGE Renewal Night Cream 0.15% or 0.3%.

- We recommend **Age Defense. HYDRO-NUTRI Anti-aging 360° Cream**.

Daily care

- Use non-aggressive, high-tolerance, gentle facial cleansing products that respect the skin's pH level. Dry the face carefully and without rubbing. **We recommend Casmara's cleansers collection.**
- Do not subject the skin to depilation and/or shaving processes, or aggressive medical-aesthetic treatments (laser, peels, microneedling, etc.).
- Avoid sun exposure and use high photoprotection. We recommend **Retinol PROAGE Renewal Day Cream SPF50**.

Retinol

PROAGE

• PROTOCOL FOR RETINIZED SKIN

If the client is currently using pure retinol and their skin has undergone partial or total retinization, the protocol should be adapted to the concentrations used, always taking into account their skin type and previous reaction to retinoids.

It is important to take into account the concentrations of pure retinol used in order to evaluate such adjustments.

- A user who is using a pure retinol concentration of 0.15% or 0.2% can start the retinization process for a concentration of 0.3%.
- In the case of users who use retinoids other than pure retinol, we would recommend starting the retinization process with the concentration of 0.15% pure retinol.
- If the client does not know the type of retinoid used or is not sure of the concentrations, we recommend starting the retinization process with the concentration of 0.15%.

• SALON TREATMENTS

Retinol Proage Treatment is specially designed to maximize the effects of retinol on the skin, boosting and complementing the retinization process at home.

When included in the retinization protocol, it acts as a booster: a shock treatment that accelerates the retinization of the skin, providing the following benefits:

Retinol PROAGE

Skin transformation in a single session:

- It leaves the skin smooth, soft and incredibly radiant.
- It reduces wrinkles and dark spots.
- It leaves the face firm and smooth.

Exponentially increased retinoid effectiveness

- Each session of Retinol Proage Treatment delivers results that are comparable to those achieved with high retinol doses. **MAXIMUM EFFECTIVENESS AND GENTLE ON THE SKIN.**

Maximum renewal

The synergy of pure retinol together with powerful anti-aging, regenerating, firming and smoothing active ingredients such as squalane, growth factors, vitamin C and proteoglycan, among many others, maximizes the renewing effectiveness on the skin.

Skin restoration

It provides nourishing and moisturizing active ingredients that prevent and reverse the possible negative effects of retinol on the skin.

Casmara recommends that an initial session of Purifying Treatment is carried out before starting the protocol in order to prepare the skin.

During the retinization process, it is recommended to carry out at least 4 sessions of Retinol PROAGE Treatment for each percentage of retinol, starting from the second week of use of the specific concentration, and on alternate weeks. This recommendation may be adapted according to the client's response to the retinization process, increasing or decreasing the number or frequency of sessions. Each session should serve as a checkpoint at which to evaluate the evolution of the skin and adapt the protocol if necessary. **Each session of Retinol PROAGE Treatment replaces the use of Retinol PROAGE Renewal Night Cream on that day.**

Retinol PROAGE Treatment may be carried out both in the morning and afternoon, but it is important to use a high photoprotection after the session. We recommend Retinol PROAGE Renewal Day Cream SPF50 to maximize results.
