

CASMARΛ

Open Pore

Pre-extraction gel.

[PROFESSIONAL USE ONLY]

Open Pore

PRE-EXTRACTION GEL.

Pore unclogging gel specially designed as the perfect complement for all types of facial hygiene protocols, prior to professional comedo and blackhead removal.

Although steaming has traditionally been the most widely used skin preparation method, despite being effective, it's proven to considerably sensitize the skin, as well as being uncomfortable for clients. Casmara Open Pore is the perfect substitute for steaming, guaranteeing deep yet gentle skin cleansing.

Thanks to its **intensive pore unclogging action**, it prepares the skin for extraction, making it an essential product for any beauty salon.

Its advanced **OPEN PORE technology** is a perfect combination of **oils, hydrolyzed oat and natural surfactants** that act in optimal synergy to help unclog pores, soften comedones and remove accumulated dirt from pores.

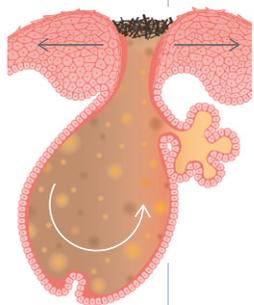

RESULTS:

The skin is perfectly prepared for a gentle yet effective extraction, where all signs of irritation caused by rough or excessive handling are reduced to a minimum.

NOTE: *compatible with manual extraction and devices such as hand tools, ultrasonic spatula, vacuum therapy, hydrotherapy, etc.*

BENEFITS:

- ✔ Reduces potential discomfort caused by handling the skin during and after the facial hygiene process.
- ✔ Helps provide a more efficient and less aggressive skin extraction.
- ✔ Guarantees deep cleansing of pores and comedones.

APPLICATION METHOD:

Apply the product over the face or treatment area. Leave on for 5-12 minutes, massaging into the most problematic areas. Remove with moistened cotton wool pads or a Casmara towelette and begin the extraction.
